### WATER SOLUBLE SEEDS TAPE

This is an agricultural tape which is used to sowing seeds in regular depth with manual or automatic sower after packing in a needful interval exactly by using water soluble non-pollution vinyl(Horceron tape) or cotton material(Meshuron tape) dissolved by bacteria.

Horceron tape: Water soluble and Non-pollution film. Contains hastening sprout material and used to short-term plants (radish, cabbage, burdock, etc)

Meshuron tape: Dissolved by bacteria in soil. Soak packed seed in water for a regular period of time to help with sprout promotion and it can be used after d-dehydration in long term plants (carrot, spinach, etc)

### Comparison Seed Tape sowing with Traditional sowing

(Seed tape sowing)

- Seed saving (required 30~50%)
- Man power saving  
(required 16,500 /Day - 1man)
- Equal sprout and growth  
(regular sowing depth)
- Accurate sowing interval(Length and breadth intervals are set automatically)
- Man power saving in weeding out  
(Possible to adjust interval between the seeds)
- Crop of abundant equal products

(Traditional sowing)

- Seed wasting (required 100%)
- Man power wasting  
(required 9,900 /Day - 1man)
- Unequal sprout and growth  
(irregular sowing depth)
- Inaccurate sowing interval(impossible to set the intervals regularly)
- Man power wasting  
(Impossible to adjust interval between the seeds)
- Lots of unequal products

Sprout

Growth

Crop

**? Properties**

Equal sprout  
Equal growth  
Abundant crop

- Sprout nearly same because seed should be sowed with a regular depth.
- Grow equally because plants sprout same as long as no problem with soil.
- Equal sprout and growth condition leads to superior products and abundant crop for no coming out of head.
